

BANKING MANAGEMENT SYSTEM

Step-by-Step Algorithm

1. Start

- 1 Start the program.
- 2 Create an ArrayList to store Account objects.
- 3 Create a Scanner object for input.

2. Main Menu

- 1 Display Insert, Delete, Update, Display and Exit options.
- 2 Read the user's choice.

3. Insert Account

- 1 Read Account Number, Name and Balance.
- 2 Create a new Account object.
- 3 Add the object to the ArrayList.
- 4 Display 'Account inserted successfully!'.
- 5 Return to the main menu.

4. Delete Account

- 1 Read the Account Number to delete.
- 2 Search for the account in the ArrayList.
- 3 If found, remove the account.
- 4 Display 'Account deleted successfully!'.
- 5 If not found, display 'Account not found!'.
- 6 Return to the main menu.

5. Update Account

- 1 Read the Account Number to update.
- 2 Search for the account in the ArrayList.
- 3 If found, read the new Name and Balance.
- 4 Update the Name and Balance.
- 5 Display 'Account updated successfully!'.
- 6 If not found, display 'Account not found!'.
- 7 Return to the main menu.

6. Display Accounts

- 1 Check whether the ArrayList is empty.

- 2 If empty, display 'No accounts available!'.
- 3 Otherwise, display Account Number, Name and Balance for all accounts.
- 4 Return to the main menu.

7. Exit

- 1 If choice is 5, display 'Thank you!'.
- 2 Terminate the program.

8. Invalid Choice

- 1 If the choice is not 1 to 5, display 'Invalid choice!'.
- 2 Return to the main menu.
